Great News for all owners of oil and/or gas boilers

We have found a way to reduce the cost of heating your home by installing our brilliant infrared heating panels, Made in Austria by www.heat4all.at

During the Winter of 2022/3 over 213 days, we heated the parts of our house we use, namely 73 square metres with six infrared panels at a cost to buy of £2,000. Over that period, we used 2,280 kWhs at a cost of £410.

Over the previous Winter we used our oil central heating in the same areas at a cost of use of about £2,200. We therefore had a saving of £1,790.

The payback period was about 13 months against a payback period if you installed an air source heat pump of over ten years.

Infrared heating is instant radiant heat just like the Sun. It heats people and objects and not the air. It is therefore not wasteful as with convection heat from radiators. That is why the cost of use is so low as there is no warm up period required. The heat does not escape through walls, windows or doors so insulation is not of paramount importance. We have our infrared heating in a Victorian office/factory which is draughty and without insulation. Our heating works so well that the housebuilder whose offices they are, has just ordered 450 panels for a new development in Nottingham.

Our infrared heating will work in 95% of homes. Our house was built in 1960 with Yorkshire stone and has no insulation. We have sold to all sorts of other homes and our heating has provided all the heat required. We have had customers coming back to order more.

Installation is simple, usually one panel per room up to 24 square metres. One panel can be installed in less than an hour by one electrician, and you can buy from one panel upwards to a whole house. It is not necessary to buy more than one panel at a time if you do not have the budget. You can buy panel after panel if you want.

We offer 5 different size wattage panels starting at 170 watts to 1000 watts at a price of £258.91 to £519.78 plus delivery.

All we require from you is to email us the room measurements and ceiling heights. We will send you the same day free of charge a specification of purchase costs and estimated usage costs with no obligation to buy.
