

Cost of heating Crisis!

Gas £2800 per year

Here in the UK, we are about to experience a very unusual happening. One I cannot remember in my 60 adult years. A Cost of Heating Crisis!

It will be quite possible that half of the Country will not be able to heat their homes because of the huge cost increase of gas and indeed electricity with most electric heating systems.

We believe that because of this phenomenon we must try and help people keep warm as nothing is more miserable and unhealthier than living in cold rooms which are liable to become damp and mouldy.

To help as many people as we can we have designed an infrared heating programme to reduce annual bills to around £600 as opposed to £2800 for gas and no doubt more than £2000 for oil.

To save £2200 a year it will however require the purchase of our infrared Heating system which for a 4-bed house will cost around £2000. Obviously, a smaller house will not need so much heating and the cost to buy will be less.

However, if £2000 is not readily available unless a Bank or other loan can be arranged buying infrared panels over a period could be the answer. Buy one panel at a time for one room at a time installing the room used the most and so on. During which time cutting down on the use and cost of gas room by room.

Our panels come in 5 sizes from 175 watts for a small bathroom or Ensuite up to 1000 watts for a room up to 24 square metres. The prices range from £168 up to £356 plus VAT and delivery. For volume over 50/250 panels the prices reduce.

Please call us to discuss your requirements. Ask us any questions if your knowledge of infrared is limited. If you wish to purchase all we need are your room size/s. We will then supply a Specification.
